SUMMARY

Motivated Software Engineering undergraduate with a solid foundation in software development and a passion for creating efficient, user-friendly solutions. Proficient in modern programming languages, frameworks, and tools, with hands-on experience in full-stack web development. Dedicated to writing clean, maintainable code and solving realworld challenges through innovative approaches. Eager to contribute to impactful projects, collaborate with dynamic teams, and expand knowledge as a Software Engineer Intern.

EDUCATION

SRI LANKA INSTITUTE OF INFORMATION TECHNOLOGY

- BSc(Hons) in Information Technology Specializing in Software Engineering
- Successfully completed Higher Diploma in Information Technology

Undergraduate (2022–Present)
(July - 2024)

TECHNICAL SKILLS

- **Languages** : HTML, CSS, JavaScript, TypeScript , C , C++ , Java
- **Frameworks** : React, Angular, Spring boot, Vue.js, Express.js , OSGI
- **Databases** : MongoDB, MySQL
- **Technologies** : Git, MERN Stack, MEAN Stack , MVC Architecture

PROJECT EXPERIENCE

Food ordering and delivery system *React.js, Spring Boot(Microservices), Spring Security,MySQL, Docker* [GitHub link](#)

- Designed and developed a cloud-native food delivery system using Spring Boot microservices architecture
- Implemented role-based access control for Admins and Owners and Users using Spring Security with JWT
- Built separate services for restaurant management and reviews for modularity and scalability
- Applied Spring Cloud for Eureka, centralized configuration, and API Gateway for routing and load balancing
- Created a responsive React frontend with protected routes based on user roles and token-based authentication.
- Employed MySQL for persistent data storage and structured relational data management.
- Deployed components using Docker, and ensured stateless communication between services via REST APIs.

MovieHub *MERN Stack, Tailwind CSS, Git, framer-motion*

[GitHub link](#)

- Movie Hub is a full-featured Movie Web Application
- It allows users to explore movies, leave reviews and ratings and interact with a user-friendly interface.
- Authentication: JWT (JSON Web Tokens)
- Version Control: Git & GitHub

Financial Tracker

Node.js, Express.js, MongoDB, REST API, Cron Jobs, Multi-Currency, Git

[GitHub Link](#)

- Designed and developed a financial tracking system enabling users to manage income, expenses, budgets and savings with a user-friendly RESTful
- Implemented multi-currency support allowing users to record and view transactions in their preferred currencies with real-time exchange rate updates via third-party APIs
- Built a recurring transaction engine for subscriptions, salaries, and rent with support for customizable patterns
- Integrated automatic savings allocation from income to financial goals, including dynamic tracking and progress visualization
- Enabled category-based and tag-based expense classification with advanced filtering and insights.
- Added notification and alert systems for unusual spending, bill payment reminders, and goal milestones
- Built secure authentication and role-based access control using JWT for protected endpoints and data integrity

Eldery Care System

MERN Stack, Tailwind CSS, Git

[GitHub link](#)

- Led the development of a web-based Elderly Care Management System as part of a team project
- Designed and implemented the Volunteer Management Module, enabling efficient onboarding, scheduling, and tracking of volunteers and generate volunteer certificates.
- Ensured responsive UI using Tailwind CSS for accessibility and ease of use for elderly
- Collaborated using Git and GitHub for version control and team coordination
